 Lynn Hospelhorn, Nursery Supplies

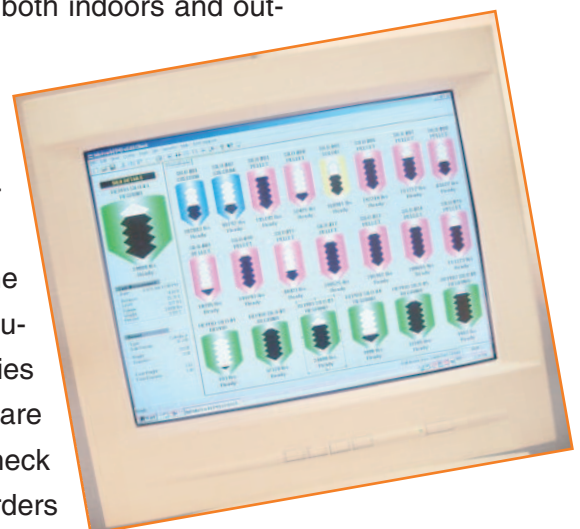

SiloTrack™ Inventory Management Software has proven once again that remote inventory monitoring can be easy and trouble-free.

Nursery Supplies manufactures plastic garden products at their four locations in the United States. Using plastic pellets, this customer makes plastic flowerpots to ship plants, trees and shrubs from nurseries to distribution points. They also manufacture watering cans and decorative garden items for retail sale.

The home office is located in Pennsylvania and has 21 **SiloPatrol®** Silo Monitoring Units (SMUs) in operation. The Florida location has 18 SMUs. The California location has 14 SMUs. The Oregon location currently has 3 SMUs, but will be adding 4 more in the near future. The SMUs are monitoring silos of various dimensions both indoors and outside.

The Pennsylvania home office has been using **SiloTrack** since Version 1. Now all facilities are operating with Version 2.03. Both Server and Client software are running at all locations utilizing the company's network.

Lynn Hospelhorn reports that Nursery Supplies likes the **SiloPatrol** SMU because it is an economical, accurate and trouble-free measuring system. Nursery Supplies likes **SiloTrack** Inventory Management Software because it allows central purchasing to check inventory at all four locations and place orders accordingly. The Client software makes a big difference in their day-to-day operations.▼

Coming Soon: **SiloTrack**™ Version 3.0

The **NEW SiloTrack**™ Inventory Management Software Version 3.0 provides users with an unsurpassed flexible graphical interface for use with **SiloPatrol**® Model SMU "smart" sensors.

Together **SiloTrack** Server and Client software can provide inventory management to a virtually unlimited number of users via LAN, Internet/WAN or Dial-up modem. Users of the **SiloTrack** system can be both internal and external to a facility. This allows for easy implementation of remote inventory monitoring and vendor managed inventory applications.

Some of the new features in Version 3.0 are an easy-to-use Setup Wizard, foreign language customization, standard report generator and easy handling of multiple sensor vessels. This is in addition to the other outstanding features of **SiloTrack** including the ability to export history or alarm data and initiate analog/relay outputs via the **SiloPatrol** Auxiliary Output Enclosures. Additionally, **SiloTrack** can setup auto, manual or auto/manual measurements and four alarms and relays per silo.

The free demo CD includes BOTH the Server and Client software packages (sold separately) to demonstrate the simplicity of use and functionality of using **SiloTrack** V3.0 in multiple PC LAN or remote access environments.▼
